

"Introducing Check'In Pro 2: Artifeel's new intelligent alarm for professional spaces"

September 2, 2024 - Artifeel, the innovative French start-up transforming infrastructure and space security with AI & IoT, proudly announces the launch of "Check'In Pro 2".

This advanced intelligent alarm system enhances the Check'In range by integrating smart motion detection, specifically designed to meet the heightened security and flexibility needs of professional environments.

Enhanced Detection Capabilities for Professional Spaces

The Check'In technology's efficiency and autonomy have quickly appealed to professionals seeking a robust solution against squatting and theft.

The Check'In Pro 2 system is crafted by Artifeel to offer a comprehensive security solution for:

- Ground-level premises or those on the first floor.
- Vacant properties safeguarded by security professionals.
- Mobile homes or modular buildings used for construction sites or temporary setups.
- Isolated spaces lacking WiFi or electricity, with minimal openings or primarily consisting of a single area.

"Our goal was to deliver a simple, effective, and tailored solution for these professional spaces, where security is a significant financial concern. A break-in can lead to operational halts, resulting in stock loss, production downtime, and reduced public access" stated the Artifeel team.

To achieve this, our team combined the unique performance of our embedded AI with advanced motion detection technology for optimal intrusion detection. The system differentiates between authorized use and unauthorized entry through non-main entrances.

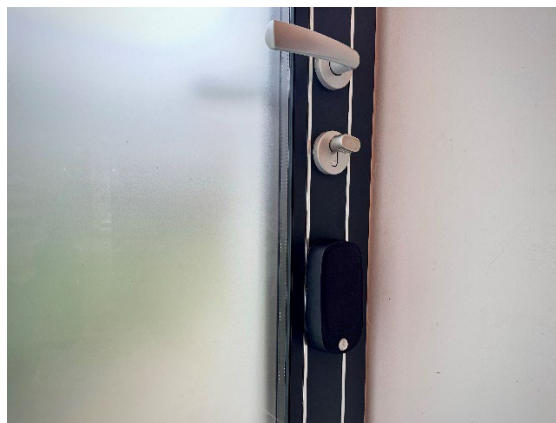

Key Benefits:

- 24/7 effective and flexible protection without complicating the management of authorized personnel movements.

- Reduced false alarms typically associated with motion detection technology.

This innovation ensures continuous and reliable protection for professional premises, minimizing operational disruptions due to intrusions.

Check'In Pro 2 by Artifeel

An alarm boosted by the hardware and software advancements of the second generation of Check'In technology.

This next-generation alarm system incorporates all the hardware and software advancements of the [second-generation Check'In technology, unveiled at Vivatech on May 24](#):

- Enhanced autonomy through hardware upgrades.
- Faster system performance with the "Power Saving Mode" for optimized energy management.
- Improved connectivity with dual SIM functionality for complete connectivity redundancy, ensuring uninterrupted communication with remote or temporary sites.

Like all Check'In and Check'In 2 alarms, Check'In Pro 2 can be paired with a Check'In Bluetooth identification badge.

Now Available from Artifeel

Check'In Pro 2 is now available for purchase in France and internationally through Artifeel's partner network. This release follows the successful launch of Check'In 2, with Check'In Infra 2 soon to follow.

About Artifeel

Artifeel is a French start-up committed to developing IoT products that adapt seamlessly to any context. Specializing in AI & IoT technologies, Artifeel has created the all-in-one "Check-In" alarm and monitoring device, the only market solution equipped with AI, 100% autonomous, requiring no WiFi or electricity.

Located in Paris and Lyon, Artifeel continuously develops and enhances its "Made In France" technologies and products to meet the protection and monitoring needs of all professional and private premises, even the most isolated. This revised version emphasizes clarity, conciseness, and a professional tone, making it more suitable for a B2B audience.
