

# **Artifeel Revolutionizes Security for All Infrastructure with Check'In 2: Faster and More Autonomous Than Ever**

*Paris, May 13, 2024 – Artifeel, the French startup revolutionizing the IoT and AI fields dedicated to security and infrastructure monitoring, is proud to announce the launch of the second generation of its Check'In alarm system. This new generation enhances autonomy, simplicity, and efficiency of the technology that is transforming smart homes and smart cities and will be previewed at the Vivatech fair in Paris.*

## **Continuous Innovation for Optimized Security**

This new generation of Check'In represents a significant advancement in autonomous alarm system technology. Thanks to a comprehensive overhaul of its hardware and software, Check'In 2 offers extended energy autonomy and increased efficiency, meeting the growing needs and demands of our clients in France and internationally.

Alain Staron, founder and CEO of Artifeel, stated:

*“This new generation of Check'In is the result of constant improvement efforts by our teams, powered by the enthusiastic feedback from our clients and partners, both in France and internationally. They are impressed by the effectiveness of our embedded AI technology and are requesting us to cover even more openings, locations, and infrastructures.”*

## **Enhanced Autonomy Through Hardware Evolution**

Requiring neither Wi-Fi nor electrical connections, Check'In already boasts a substantial autonomy of two years thanks to its high-density battery power. This autonomy is further boosted in Check'In 2, thanks to the design of a new, more efficient and economical hardware version that extends the system's power longevity.

This crucial innovation benefits users seeking a reliable and sustainable security solution without constant maintenance, such as telecom, gas, electricity, and railway operators looking to protect and secure a range of isolated technical infrastructures.

The extension of battery life also reduces the overall environmental impact of the system.

## **A Faster System with the Integration of 'Power Saving Mode'**

Check'In 2 now routinely includes the option to activate the Power Saving Mode. This feature, recently offered by telecom operators, facilitates the alarm's connection to the network, speeding up data transmission times.

As noted by Clément Courselle, CPO of Artifeel:

*“The integration of 'Power Saving Mode' significantly accelerates the transmission of alerts. Critical event notifications are now sent in an average of just 5 seconds, ensuring unprecedented responsiveness!”*

## Enhanced Connectivity Options

The functionality of dual SIM has been optimized to ensure flawless connectivity, even in the most isolated areas. Already present in the first generation of Check'In, this external dual SIM device allows connectivity redundancy through multiple telecom operators, whose geographic coverage can be international or very local, thus providing unparalleled reliability to the Check'In system.

This feature is particularly useful for the rapid deployment of the system in new geographic areas, supporting Artefeel's international expansion.

## Strengthening Artefeel's Growth Strategy

These technological innovations are not just product improvements; they reflect our strategic vision for growth and expansion. By enhancing the autonomy and connectivity of Check'In, Artefeel positions itself as an undisputed leader in the field of intelligent security and monitoring technologies, ready to meet the global needs of both professional and private clients.

## New products available from June and previewed at Vivatech

The new features will be available from June and previewed at Vivatech, with rapid deployment across all Check'In 2, Check'In Pro 2, and Check'In Infra 2 range boxes throughout 2024.

*To discover our new technological generation firsthand and discuss your needs and the solutions we can offer, join us at VivaTech on May 24 at the CCI Ile-de-France booth (Hall 1 - G50), and on May 25 at the Orange booth (G12 061).*

*Do not hesitate to contact us to arrange your visit to the booth!*

**Check'In range of products**

**Check'In All-in-One alarm box**

- Check'In
- Check'In Pro + Motion detector
- Check'In Infra + Movement + Brightness

**Hypervision tools**

- Dashboard Pro
- App User
- App Pro

**Accessories**

- Bluetooth Access badge
- Garage door wedge (For grooved up-and-over doors)
- Waterproof case

## **About Artifeel**

The French startup Artifeel is committed to developing IoT products that adapt to you and blend into the background!

Specializing in Artificial Intelligence & IoT technologies, Artifeel has created the all-in-one alarm and monitoring box "Check-In", the only device on the market equipped with Artificial Intelligence, 100% autonomous and requiring neither Wi-Fi nor electricity.

The Artifeel teams, located in Paris and Lyon, continuously develop and improve their "Made In France" technologies and products, to meet the protection and monitoring needs of all professional and private premises and infrastructures, even the most isolated.
